ACQUISITION ANNOUNCEMENT - PRESS RELEASE

LIGER MEDICAL LLC ACQUIRES MOBILEODT Ltd. TO FURTHER THE GOAL OF ELIMINATING CERVICAL CANCER WORLDWIDE

Liger Medical is best known for its work in women's health globally whilst MobileODT has spent the past decade developing mobile phone-based screening tools for use in cancer detection and women's health

1st August 2022, Lehi, UTAH: Liger Medical LLC today announces the acquisition of MobileODT Ltd. to further its products and platforms designed with women's health in mind. Currently approximately 340,000 women die each year due to lack of access to health services that would allow for the detection and treatment of cervical cancer - through past partnerships Liger Medical and MobileODT saw mutual benefit in cooperating to streamline the delivery of their screen and treat services with MobileODT providing colposcopic diagnosis of precancer of the cervix, and Liger Medical treating with the relevant products including its breakthrough mobile thermocoagulator and electrosurgical unit.

Wm. Dean Wallace, MD, PhD, PRESIDENT/CEO of Liger Medical stated, "Liger Medical's products provide innovative and useful solutions for women's healthcare. Specifically, our charter is to be part of the team to eliminate cervical cancer which remains a global killer due to lack of access to basic health services, mainly in low-resource regions of the world. MobileODT Ltd. was formed for a similar purpose and the acquisition will enhance our ability to help accomplish this in an expeditious and effective manner. MobileODT has consistently been a pioneer with extraordinary insight in the colposcopic diagnosis of precancer of the cervix. As we go forward, it is crucial that we support organizations, countries, and individuals that are dedicated to the elimination of cervical cancer and that have practical, cost-effective devices to accomplish this objective."

Ariel Beery, MobileODT co-founder says, "We founded MobileODT with the mission to build a technology to save as many lives as quickly as possible". "We are thrilled MobileODT will be joining the impressive value-driven efforts of Liger, who are a leader with devices for the treatment of cervical precancer. We're excited to be a part of that mission, and ensure that every healthcare professional who serves serving women will be able to screen for and treat cervical precancer at the point of care regardless of where they are in the world."

The acquisition will allow for the advancement of both diagnostic and treatment tools in the future, as well as smoother screen and treat programs for women around the world.
